COVID-19 is mostly spread through close contact and inhalation of respiratory droplets released when people talk, sing, breathe, sneeze, or cough. Although less common, it is possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own eyes, nose, or mouth. To slow the spread of COVID-19 in your community and facility, your child care program should fully implement and adhere to multiple prevention strategies. First and foremost, it is very important that child care staff are encouraged to get vaccinated.

Louisiana has been reopening in phases as the state meets certain criteria. Throughout these phases, restrictions have been gradually relaxed. Child care has been able to remain operational during all phases and even prior to Phase I due to continued adherence to the guidance from the Louisiana Department of Education (LDOE) and Louisiana Department of Health, Office of Public Health. So long as providers continue to adhere to the guidance, they may continue to operate. The guidelines below must be followed throughout Phase III. Requirements are underlined and must be followed. Items in red are new or revised.

The LDOE has also provided suggestions, examples of checklists, options, etc. in the appendices to assist child care in adhering to the guidelines and to improve upon their health and safety during this public health emergency.

NOTE: These guidelines may change depending on the Centers for Disease Control (CDC) and Office of Public Health updates and as the state changes phases.

CHECKLIST FOR OPEN CHILD CARE FACILITIES

- Staff must take everyday precautions to prevent the spread of COVID-19 such as: wear a mask, avoid close contact, avoid crowds and poorly ventilated areas, wash hands often, cover coughs and sneezes, clean and disinfect highly touched surfaces daily and monitor your health.
- Require sick children and staff to stay home. (See Appendix 1.)
- Plan isolation steps if a child becomes sick followed by cleaning and disinfecting processes. (See Appendix 2.)
- Implement social distancing strategies. (See Appendix 3.)
- Adjust parent drop-off and pick-up processes and potential parent tours. (See Appendix 4.)
- Screen children and staff upon arrival. (See Appendix 5.)
- Intensify cleaning and disinfecting efforts. (See Appendix 6.)
- Ensure proper diapering techniques are followed.
- Ensure proper washing, feeding, and holding of children. (See Appendix 7.)
- Ensure healthy hand hygiene. (See Appendix 8.)
- Ensure healthy food preparation and meal service. (See Appendix 9.)
- Address vulnerable/high risk groups. (See Appendix 10.)
- Ensure adequate ventilation. (See Appendix 11.)
APPENDIX 1

REQUIRE SICK CHILDREN AND STAFF TO STAY HOME

Persons who have a fever of 100.4°F or above, or other signs of illness must not be admitted to the facility.

- Communicate to parents the importance of keeping children home when they are sick, steps being taken to ensure the health and safety of their children, etc. See this [sample letter](#) to families. The letter to families should outline all health and safety precautions taken by your facility. Another sample can be found from [Child Care Aware of America](#).

- Communicate to staff the importance of being vigilant for symptoms and staying in touch with management if or when they start to feel sick.

- Follow procedures to ensure children and staff who come to the child care center sick or become sick while at your location are placed in isolation and sent home as soon as possible.

- **Staff will clean high-touch surfaces, such as door handles, light switches, faucets, toys and games that children play with at least twice a day.**

- **Staff will wash their hands and children’s hands a minimum of every two hours.**

APPENDIX 2

PLAN ISOLATION STEPS IF A CHILD OR STAFF MEMBER BECOMES SICK FOLLOWED BY CLEANING AND DISINFECTING PROCESSES

There must be an isolation plan, including a cleaning and disinfecting process, for children who become sick.

- Have an isolation room or area (such as a cot in a corner of the classroom) that can be used to isolate a sick child.

- Follow CDC guidance on how to [disinfect your building](#) if someone is sick.

- If a sick child has been isolated in your facility, clean and disinfect surfaces in your isolation room or area after the sick child has gone home.

- If COVID-19 is confirmed in a child or staff member:
  - Follow [CDC Guidance](#) on home isolation for confirmed or suspected COVID-19.
  - Identify close contacts (within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period) and communicate the requirement to quarantine for 14 days

- Things to consider when a child or staff member is ill or becomes ill:
  - How will you communicate with families of an ill child?
  - How will you communicate with staff and other families about the illness at the center?
  - What do you expect from an ill child before they can return?
  - Suggest to families that they should have a plan in place in the event that their child become ill.
IMPLEMENT SOCIAL DISTANCING STRATEGIES

- Children and staff must pass singly through entry and exit points.

- Ensure that children’s naptime mats (or cribs) are spaced out as much as possible, ideally 6 feet apart. Place children head to toe in order to further reduce the potential for viral spread.

- Field trips are allowed but must be held outside. Adhere to transportation capacity and outdoor group guidance as indicated below.

- Special events, performances, or holiday events (such as, but not limited to, pre-K Graduation, magic shows, Zoo to You, or Soccer Shots) are allowed but must be held outside. Adhere to the outdoor group guidance indicated below.

- If possible, child care classes should include the same group each day, and the same child care teacher should remain with the same group each day. Consider creating a separate classroom or group for the children of healthcare workers and other first responders.

- Consider staggering playground times for groups of children.

- Alter or halt daily group activities that may promote transmission.

- Transportation:
  
  » Buses or vans can operate at 100% capacity if there is 100% masking (including adults)
    
    • Open ventilation safely.
    
    • Have a seating chart on the bus to aid with contact tracing and limit quarantining in the event of a positive COVID case.
  
  » Without 100% masking, only fill the van or bus to 75% capacity (including adults)
    
    • To calculate 75% capacity, take the number of seats and multiply by 75% of the manufacturer’s capacity. This is the maximum number of people allowed on the bus or van at any given time.
    
    • Space and disperse passengers to the maximum extent possible.
    
    • If static groups are not maintained, all passengers must wear masks while utilizing transportation.
    
    • Open ventilation safely.

- Outdoor groups:
  
  » Groups must be separated, but do not require a physical barrier.

  » Maintain static groups as much as possible to prevent quarantining additional children and staff.

  » In swimming pools, lines or ropes are no longer needed.
APPENDIX 4

ADJUST PARENT DROP-OFF AND PICK-UP PROCESSES

• Parent drop-off and pick-up processes must be adjusted.

• Parents can enter the building to drop off and pick up their children if the following occur:
  » The amount of time each parent spends in the classroom during drop-off and pick-up is minimized.
  » Parents are screened prior to entering the building. Parents must wear a mask and physically distance from staff, children that are not members of their household, and other parents.
  » See the procedures below to screen children before the parent leaves the facility.
  » Parents are informed that they will be required to notify the center if they test positive for COVID-19.
  » Drop off and pick up times are staggered when possible.

• A provider can have a parent drop-off and pick-up process at curbside to limit direct contact between parents and staff members. See the procedures below to screen children before the parent leaves the facility.
  » Child drop off and pick up can be done curbside or in a room or foyer that does not allow the parent inside the center or does not lead the parent through the center. The parent must wear a mask if they enter the room or foyer.
  » Have child care providers come outside the facility to pick up the children as they arrive. The plan for curbside drop off and pick up should limit direct contact between parents and staff members and adhere to social distancing recommendations. Allow center staff to sign in and out children.
  » May consider staggering arrival and drop off times for parents.

• Hand hygiene stations should be set up at the entrance of the facility, so that children can clean their hands before they enter. If a sink with soap and water is not available, provide hand sanitizer with at least 60% alcohol and supervise its use. Keep hand sanitizer out of the reach of children before and after use.

• Face-to-face teacher and family communications will shift as drop-off and pick-up procedures change.
  » Consider the following:
    • How will families communicate child needs and challenges to the child’s teacher?
    • How will teachers communicate issues, stories, and fun moments with families?
    • How can the center share stories of the relationships in classrooms with the community of families?

ADJUST POTENTIAL PARENT TOURS

• Tours for potential new parents or family members can occur physically during the day if the following occur:
  » Only parents or family members from one household are allowed into the building at a time.
  » All visiting parents or family members are screened prior to entering the building.
  » All visiting parents or family members must wear a mask and must socially distance.
  » The parents or family members cannot enter a classroom or area where children are present. If children are outside, the parents can enter the empty classroom for a tour.

• Consider offering tours virtually or before and after center operations.
SCREEN CHILDREN AND STAFF UPON ARRIVAL

Children and staff must be screened upon arrival. Persons who have a fever of 100.4°F or above or other signs of illness must not be admitted to the facility.

- Children must be screened for fever upon arrival as well as throughout the day. Include asking the parent/guardian to confirm that the child has not been on fever reducing medication in the last 24 hours and does not have shortness of breath, sore throat, rash (other than diaper rash), or a cough. Make a visual inspection of the child for signs of illness which could include flushed cheeks, rapid breathing or difficulty breathing, fatigue, rash (other than diaper rash) or extreme/unusual fussiness.

- Listed below are examples of possible ways to screen for a temperature.
  
  » Example 1 – Reliance on Barrier/Partition Controls
    • Stand behind a physical barrier, such as a glass or plastic window or partition that can serve to protect the staff member’s face and mucous membranes from respiratory droplets that may be produced if the child being screened sneezes, coughs, or talks.
    • Conduct temperature screening (follow steps below).
      » Perform hand hygiene.
      » Put on disposable gloves.
      » Check the child’s temperature, reaching around the partition or through the window.
      » Make sure your face stays behind the barrier at all times during the screening.
      » If you use disposable or non-contact thermometers and you did not have physical contact with the child, you do not need to change gloves before the next check.

  » Example 2 – Reliance on Personal Protective Equipment
    • If social distancing or barrier/partition controls cannot be implemented during screening, personal protective equipment (PPE) can be used when within 6 feet of a child.
    • Upon arrival, wash your hands and put on a facemask, eye protection (goggles or disposable face shield that fully covers the front and sides of the face), and a single pair of disposable gloves. A gown could be considered if extensive contact with a child is anticipated.
    • Take the child’s temperature.
    • After each screening, remove and discard PPE, and wash hands.
APPENDIX 6

INTENSIFY CLEANING AND DISINFECTING EFFORTS

• At least twice a day, clean surfaces, bathrooms, and objects that are frequently touched, such as doorknobs, light switches, classroom sink handles, countertops, toilet training potties, etc.

  » In most situations, regular cleaning (at least twice a day) is enough to sufficiently remove viruses that may be on surfaces. However, if certain conditions apply, you may choose to clean more frequently AND disinfect surfaces and objects if certain condition apply which may include:
  • High transmission of COVID-19 in your community.
  • The space is occupied by people at increased risk for severe illness from COVID-19.

• Schedule and follow additional procedures for cleaning and disinfecting including cleaning and sanitizing toys and bedding. All cleaning materials must be kept secure and out of reach of children.

• Do not share toys with other groups of infants or toddlers, unless they are washed and sanitized before being moved from one group to another.

• Clean and sanitize toys.
  » Reduce the number of toys in classrooms.
  » Toys that children have placed in their mouths or that are otherwise contaminated by body secretions or excretions should be set aside until they are cleaned by hand by a person wearing gloves.
  » Children’s books, like other paper-based materials, are not considered a high risk for transmission and do not need additional cleaning or disinfection procedures.

• Clean and disinfect bedding.
  » Keep each child’s bedding separate, and consider storing in individually labeled bins, cubbies or bags.
  » Cots and mats should be labeled for each child.
  » Bedding that touches a child’s skin should be cleaned at a minimum of weekly or before use by another child.

• Plan to sanitize transportation. Consider guidance from the Center for Disease Control on Cleaning and Disinfecting Vehicles to ensure that shared equipment like vehicles are regularly sanitized.

APPENDIX 7

ENSURE PROPER WASHING, FEEDING, AND HOLDING OF CHILDREN

Proper washing, feeding and holding of children must be ensured.

• It is important to comfort crying, sad, and/or anxious children and they often need to be held. When washing, feeding, or holding children, teachers can protect themselves by washing their hands frequently.

• Teachers should wash their hands, neck and anywhere touched by a child’s secretions.

• Teachers should change the child’s clothes if secretions are on the child’s clothes.

• Infants, toddlers, and their teachers should have multiple changes of clothes on hand in the child care center.

• Children are not required to wear face masks. If a center decides to allow children to wear face masks, no child under two years of age can wear a face mask.
ENSURE HEALTHY HAND HYGIENE

• All children and staff must engage in hand hygiene at least every two hours at the following times:
  » Arrival and exit of the facility and after breaks
  » Before and after preparing food or drinks
  » Before and after eating or handling food, or feeding children
  » Before and after handling infant bottles
  » Before and after administering medication or medical ointment
  » Before and after diapering
  » After using the toilet or helping a child use the bathroom
  » After coming in contact with bodily fluid
  » After handling animals or cleaning up animal waste
  » After playing outdoors or in sand
  » After handling garbage

• Wash hands with soap and water for at least 20 seconds or use hand sanitizers with at least 60% alcohol before and after:
  » Touching your eyes, nose, or mouth
  » Touching your mask
  » Touching an item or surface that is frequently touched by other people such as door handles

• Supervise children when they use hand sanitizer to prevent ingestion.

• Assist children with handwashing, including infants who cannot wash hands alone. After assisting children with handwashing, staff should also wash their hands.

ENSURE HEALTHY FOOD PREPARATION AND MEAL SERVICE

Healthy food preparation and meal service must be ensured.

• If cafeterias or communal dining halls will be used, ensure separate “classrooms” or cohorts remain 6 feet apart while eating. Consider staggering when classrooms eat, so children can maintain their small groups. Clean and disinfect tables, chairs, and highchairs between each use. Surfaces that come in contact with food should be washed, rinsed, and sanitized before and after meals.

• If feasible, remove or limit additional staff coming into classrooms during mealtimes.

• As feasible, have children and staff eat meals outdoors or in well ventilated classrooms or while maintaining distance as much as possible.

• If meals are typically served family-style, plate each child’s meal to serve it so that multiple children are not using the same serving utensils.

• Food preparation should not be done by the same staff who diaper children.

• Sinks used for food preparation should not be used for any other purposes.

• Teachers must ensure children wash hands prior to and immediately after eating.

• Teachers must wash their hands before preparing food and after helping children to eat.
APPENDIX 10

ADDRESS VULNERABLE AND HIGH RISK GROUPS

Vulnerable and high risk groups must be addressed.

- Based on current information, older adults and people of any age who have serious underlying medical conditions might be at higher risk for severe illness from COVID-19. To protect those at higher risk, it’s important that everyone practices healthy hygiene behaviors. If you have staff members or teachers aged 65 or older, or with serious underlying health conditions, encourage them to talk to their healthcare provider to assess their risk and to determine if they should stay home or vaccinate.

- Information about COVID-19 in children is somewhat limited, but the information that is available suggests that many children have mild symptoms. However, a small percentage of children have been reported to have more severe illness. If you have children with underlying health conditions, talk to their parents about their risk. Follow children’s care plans for underlying health conditions.

- If you have children with disabilities, talk to their parents about how their children can continue to receive the services they need.

APPENDIX 11

ENSURE ADEQUATE VENTILATION

Adequate ventilation must be ensured.

- Consider how you can bring in as much fresh air into your child care center as possible. Bringing fresh, outdoor air into your center helps keep virus particles from concentrating inside.

- Bring in as much outdoor air as possible.
  - If safe to do so, open windows and doors. Even just cracking open a window or door helps increase outdoor airflow, which helps reduce the potential concentration of virus particles in the air. If it gets too cold or hot, adjust the thermostat. Do not open windows or doors if doing so poses a safety or health risk (such as falling, exposure to extreme temperatures, or triggering asthma symptoms).
  - Use child-safe fans to increase the effectiveness of open windows. Safely secure fans in a window to blow potentially contaminated air out and pull new air in through other open windows and doors.

- Consider having activities, classes, or lunches outdoors when circumstances allow.
