

The experiences children have and the skills they develop during their early years help lay the foundation for their future growth and development, increasing their opportunity for success in school and in life. With infants and toddlers, the teacher's role is not to teach in a traditional sense per se but to observe and react on what infants and toddlers are experiencing and how they learn – and then to support this learning and development process through interactions, the relationship with the child and the provision of experiences in an environment that contributes to the child's success. In short, an excellent infant/toddler curriculum enables the teacher to provide an environment and set of individualized and integrated experiences that promote growth and learning. This rubric details the desired components of an early childhood curriculum for infants and toddlers.
