It also includes the key concepts and terms of each lesson. Also, in the teacher implementation guide, common misconceptions are listed to assist the teacher. Each activity has equal intensity of conceptual understanding, procedural skill and fluency, and application. The activities in the student edition are aligned with the standards. The standards are listed at the beginning of each lesson which the unit are broken into modules.</p>
	<p><b>REQUIRED</b> <b>3b) Attention to Procedural Skill and Fluency:</b> Materials give attention throughout the year to individual standards that set an expectation of procedural skill and fluency. In higher grades, sufficient practice with algebraic operations is provided in order for students to have the foundation for later work in algebra.</p>	Yes	<p>Within each module the activities are broken down into whole group instruction, partner work, and independent work. Each module gives a sufficient amount of practice and problem solving activities The materials and activities align with the state standards. The lesson addresses skill and fluency through a grouping and shared phase strategy. This allows the teacher and student to engage in meaningful activities to master specific standards.</p> <p>In the student edition, an example is given along with the appropriate standard and mathematical practice (math talk where the MP is being broken down). Following the example, students are required to practice the standard via guided practice then answer an essential question</p>

Students know exactly what is expected of them in reference to the MP(s). In the teacher edition, the MP(s) are listed along with the appropriate page numbers where applicable. In the student edition, the Math Talk section has the students transition the Mathematical Practice into a question to begin a discussion.</p> <p>Materials are connected to the Mathematical Practices. All practices are listed at the beginning of each lesson in the teacher’s edition. The mathematical practices are also use as a professional development in the teacher’s edition and it gives the teacher guidance on how to implement the mathematical practice into the lesson. The practices are evident in each of the activity.</p>
