Priority:
The school system will provide continuous instruction in non-core subjects, including CTE courses, during periods of school facility closure or modified operations.

Introduction:
In order to provide continuous education in non-core and CTE classes during hybrid or virtual learning, modifications to routines and procedures are necessary for school systems and leaders, teachers and parents. The following questions and answers, though not exhaustive, aim to provide examples of best practices for consideration by educators.

For information on planning for core academic courses, please reference the Implementing Continuous Core Instruction.

New Additions are highlighted throughout the document.

| ![Image](https://via.placeholder.com/15) How can students access teacher-made lessons? | Teachers may:  
  - livestream or record and post lessons, workouts, or step-by-step tutorials. Use proper parental consent if students appear in videos.  
  - use a local or school TV station to broadcast lessons.  
  - save pre-recorded lessons on devices prior to distribution to students.  
  - load pre-recorded lessons on jump drives for devices that have a USB port. Resources:

| How can schools distribute necessary materials during periods of closure? | Schools/teachers may opt to allow students/parents to pick up kits of necessary supplies per unit/project. Coordinate the distribution of materials across campus to ensure social-distancing protocols. Reusable materials distributed to students may need to be barcoded and assigned (as would a textbook) in order to keep track of who has what and when. Resources:

| --- | --- |
| How can schools/teachers keep parents informed of course requirements during periods of modified operations? | Schools/teachers may provide virtual or in-person information sessions for students and parents to support accessing the online learning platforms with which students will engage.  
A “Digital Bootcamp” can be implemented when schools reopen before course-specific instruction begins. Schools may opt to issue laptops immediately and begin teaching protocols and routines for digital learning. This will allow for a seamless pivot in instruction as needed. Resources:

| What digital platforms/modules/resources are available for schools/teachers to use during hybrid or virtual learning? | School leadership should consider streamlining the teaching platforms that staff use on campus to ensure consistency and ease of access/navigation for parents and students. Other asynchronous/synchronous learning planning considerations should also be made. |

### How can school systems creatively provide time for students to master skills required for certifications?

In order to support students towards graduation and the attainment of culminating credentials during this challenging time, schools may consider unique scheduling options for hands-on CTE coursework (e.g. Carpentry, Welding, EMR). Schools should plan ahead for each phase of operations and consider prioritizing resources, instructors, funding, and transportation to maximize credential attainment.
