Sample Year-Long Schedule for Math Instruction
SPRINGBOARD Algebra I

The following sample schedule integrates the Springboard curriculum, LEAP 360 Interim Assessments and flex days to allow teachers to move at a pace that best supports student learning. Flex days could be used for remediation, enrichment lessons, assessment, or other instructional activities. This sample should be used to guide instructional timing but should not dictate exactly what lesson a teacher should be on during a given day. The guidance has been broken into 9 weeks, as this is the calendar that most Louisiana schools systems follow.

- Coding: 1-1 represents Lesson 1-Activity 1
- Lessons marked as “optional for enrichment” in the Springboard Curriculum Map have not been included in this calendar. Teachers may determine to use these during “flex” days or after state testing.
- Even though only one day on this calendar has been marked for each of the LEAP Interim assessments, teachers may determine to split these over multiple days.

### FLEX days have been built into the calendar to address the following:
- Unpacking the Assessments
- Embedded Assessments
- Small Group Work / Mini Lessons
- Short Cycle Assessments
- Remediation Mini-lessons
- Khan Academy Practices
- Activity Practices
- Reflection of the Work
