

PhD Science: K-2 Pilot Overview

PhD Science™ kindergarten through level 2 will be available to pilot during the 2020–2021 school year and available for purchase for the 2021–2022 school year. Each level consists of four modules with a total of approximately 110 thirty-five-minute lessons. Like levels 3 through 5, each module features an authentic, knowledge-building anchor phenomenon that students explore while rigorously engaging in scientific learning. The hands-on approach of *PhD Science* allows students to interact with materials that build scientific knowledge. Modules feature high-quality texts and grade-appropriate content area connections that allow students to practice literacy and math skills in a scientific context. Each module also includes fine art as a way for all students to access and connect to art while learning about science.

Sample Pilot Pricing

Professional Development Services

PhD Science professional development sessions are designed for teachers, teacher leaders, instructional coaches, curriculum specialists, and administrators. All teachers that participate in the 2020-2021 K-2 pilot must attend a *Launch PhD Science* professional development. For information about PhD Science professional development services, review the [PD Vendor Guide](#).
